

# Fashionable and Attractive Mirror Colors

iCoat's mirror colors are available in 9 eye-catching and attractive colors both in solid and flash densities. Solid mirror coatings have higher percentage of luminous reflectance than their corresponding flash mirror colors (not shown in images below). The flash mirror generally has a hint of the color whereas a solid mirror shows a higher concentration of the color.

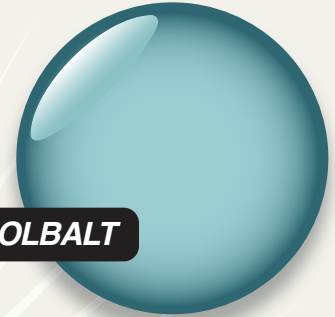

**BLACK**

*A classic dark and smoky mirror best for sun lenses*

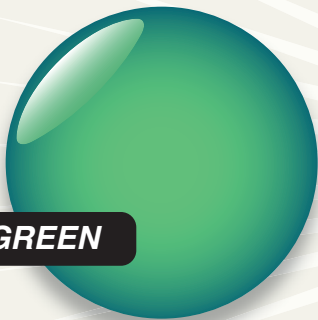

**BLUE**

*A chill blue color for a stylish and trendy look*

**COLBALT**

*A soft sapphire shade for a soothing cosmetic appearance*

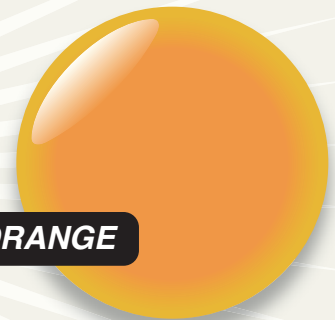

**GREEN**

*A radiant green filled with life and an earthy feeling*

**GOLD**

*A smooth and warm shade for an affluent appearance*

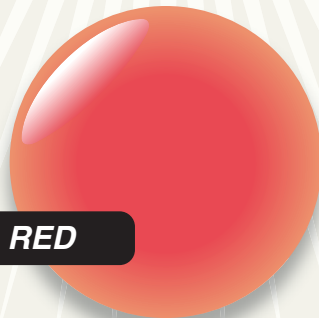

**ORANGE**

*A fresh tropical look for a vibrant personality*

**PINK**

*An infusion of crimson hues*

**RED**

*A rich scarlet mirror for a sporty experience*

**SILVER**

*A classic silver gray color for traditional looks*

*Note: The lens images in this catalog are only representations of the actual color. Actual lens colors and appearance will vary based on lighting conditions, applied base tint color, its density, and viewing angles. Mirror color illustrations shown above are for solid mirrors only. Flash mirrors are not shown in the illustrations above.*
